Dilugent

Edwin Agudelo, Technical Manager

Evolution since the first step…

Do you remember the first time we talked about this?

End users comments

Distributors meetings

The endless aspects to improve

Connectivity

Stability of the tray

Feet adjustment

What happened with the interface?

End users will have:

- Intuitive interface on 7” touch screen
- Interaction between the operator, the operation and the machine
- Different programs
- Versatile instrument to recreate these programs into new ones

Something new regarding mechanic?

The motor, the springs, the mechanical system, everything is created from zero, just new ideas, new engineering inside
Removable magnetic tray

And the design?

Modern, make with UV light resistant material and… aerodynamic

Marketing point of view

- Connectivity
  - USB, HDMI and ethernet
  - 2D code reader
  - Full traceability of operations
- Three different versions
- Advanced programming , additional shaking possible
- Supplier contact information on the screen … Not just LabRobots logo will be shown

What can we do during technical service?

We start as with DIII ☺

- Through capacitive touch screen we g

  own service menu

    We reach historical information about Dilugent and export it

    We adjust or reset variables, service intervals, error codes etc

- This is only the beginning.

Thanks for your attention
